

Gas drilling in the Marcellus Shale has become one of the greatest threats to Pennsylvania's environment and public health in decades, including:

- Contaminating drinking water supplies;
- Destroying our state forestlands; and
- Increasing air pollution.

**I am asking you to support a moratorium on further shale gas extraction in Pennsylvania until it is proven safe for our environment and the public's health.**

*PennEnvironment is working to get 100,000 petitions for a moratorium on drilling until we can guarantee it is safe for our environment and health. Please return the petitions, along with your contact information, to PennEnvironment (Adam Garber, 1420 Walnut St., Ste. 650, Philadelphia, PA 19102) a month from when you start collecting petitions, so we can make sure they are delivered with the rest to the proper legislators.*
